# Sandstone Veneer Wall Cladding

AUSTRALIAN MADE

100% Natural Australian sandstone
100% Australian made and processed
100% Australian owned

# natural sandstone

the conscious choice...

## Capricorn Sandstone's new thin veneer wall cladding range is a product made from repurposed stone offcuts.

These are a by-product of our everyday factory production process, thus requiring no extra energy to create the raw material.

Our investment in state-of-the-art European machinery allows us to efficiently process stone that would have otherwise been unusable, and means we can bring a beautiful product to the market that is both price and environmentally conscious. After all, sandstone is a beautiful natural material that we don't want to waste.

## We use high efficiency automated machines to process the stone,

which significantly reduces manual handling and therefore promotes operator wellbeing. Most factory processes use recycled water, or vacuum technology to eliminate dust, further contributing to positive health and environmental outcomes.

We pride ourselves on extracting, processing and cutting our sandstone on site in our 150-year-old quarry located in sunny Queensland, making it 100% natural, and 100% Australian.

Having shipped our beautiful sandstone all over Australia for more than 25 years, we have refined our transport processes so that we backload almost every long-distance shipment, thereby reducing emissions by making more conscious transporting choices.

## We believe producing and selling an Australian product is about more than just keeping our manufacturing on Australian soil,

it's about providing a product that doesn't cost the planet any more than it has to, looking after our staff and doing our bit for our kid's future.

The beauty of sandstone, a product of nature, is the detail, nuances and history in every piece. Australian sandstone is some of the best in the world, and it doesn't cost the earth, so you don't have to settle for second best.
